PROFESSIONAL SUMMARY

8+ years full-stack engineer expert in Java Spring Boot microservices (5+ years) and Node.js backend. Led architectural transformations: Node.js→Java/Kotlin, AWS→GCP, Pub/Sub→Kafka. Architected 12+ microservices handling billions of users with 99.95% uptime. Proven leader mentoring 5+ engineers, improving team velocity 25% and code quality 40%.

PROFESSIONAL EXPERIENCE

Senior Software Engineer

01/2022 - Present

Ultimate Kronos Group (UKG), Bangalore, India

- Architected and implemented Customer Session Resource (CSR) session management microservice using Object Oriented Programming principles and Software Development Life Cycle (SDLC) best practices, handling billions of concurrent user sessions with 99.95% availability using Java Spring Boot, Kubernetes container orchestration, and Docker containerization on Google Cloud Platform (GCP).
- Led architectural migration of Node.js microservices to Java Spring Boot and Kotlin-based services improving performance by 40%, reducing memory footprint by 35% using Redis distributed caching, database sharding strategies, and design patterns.
- Migrated messaging infrastructure from Google Pub/Sub to Apache Kafka improving throughput by 50% and reducing message latency through optimized partitioning strategies and consumer group configuration for high-throughput message processing.
- Optimized software architecture and query efficiency through Redis caching, Elasticsearch integration for complex queries, database indexing, query optimization, and performance tuning reducing response times by 20% and latency by 35%.
- Directed technical team leadership and mentored development team of 5+ software engineers, established architectural standards, design patterns, and technical best practices through code reviews, improving team velocity by 25% and code quality by 40%.
- Maintained 99.5%+ system uptime across all mission-critical services through incident management, real-time issue resolution, proactive performance monitoring, and observability using Prometheus and Grafana monitoring tools.

Associate Software Engineer

12/2020 - 01/2022

Pramati Software Private Limited (Acquired by UKG), Bangalore, India

- Developed and optimized Node.js Application Programming Interfaces (APIs) using GraphQL and Representational State Transfer (REST) for Groupe.io communication platform leveraging microservices architecture, distributed data processing, and high-throughput messaging systems.
- Implemented micro frontend architecture using Object Oriented Programming with React.js enabling independent deployment, component scaling with isolated state management using Redux library, and modular frontend development practices.
- Performed system architecture and technical design optimization across entire project infrastructure for scalability, performance, and maintainability using Docker containerization and Kubernetes container orchestration across distributed cloud systems.
- Led infrastructure migration of entire project from Amazon Web Services (AWS) to Google Cloud Platform (GCP) ensuring zero-downtime migration, optimized cloud costs, and improved system performance with GCP-native services and cloud-native architectural patterns.
- Created comprehensive monitoring and logging infrastructure using Elasticsearch, Logstash, Kibana (ELK stack) monitoring dashboards for real-time analytics, observability, and distributed tracing across microservices, enhancing decision-making and reducing debugging time by 40%.

Full Stack Developer

02/2020 - 12/2020

Way2mint Services, Bangalore, India

- Developed and engineered messaging infrastructure for MJLifeSpaces and Way2mint applications using Object Oriented Programming principles, handling millions of concurrent users with fast message delivery and real-time processing systems.
- Built data filtering, validation, and quality assurance scripts to extract unique mobile numbers and emails with comprehensive data validation and phone number validation ensuring 99%+ data quality and integrity.
- Created promotional message management dashboard with bulk upload capabilities, lazy loading optimization, data mapping functionality, and campaign management enabling users to send static and dynamic Short Message Service (SMS) and email campaigns.
- Designed and optimized system architecture for high-volume bulk messaging operations through technical improvements and technology stack optimization, supporting millions of concurrent users with minimal latency and high-throughput message processing.

Software Engineer

01/2018 - 01/2020

Hidden Brains InfoTech, Ahmedabad, India

- Developed administrative dashboards for Inventory Management System (MRS Inventory) using Object Oriented Programming principles with comprehensive multi-chart data visualization, analytics, and real-time performance metrics reporting.
- Built activity log analytics system and tracking engine monitoring user actions per minute with detailed user behavior tracking, activity logging, and audit trails across dashboard sections showing user actions at specific timestamps and locations.
- Created reusable analytics software library for activity tracking, user session management, user behavior analytics, and monitoring that became a core feature for all company products and applications across the organization.
- Integrated distributed caching layer using Memcached for database query optimization, reducing database query time by 30% and improving application throughput and performance for high-traffic administrative operations.
- Built multilingual email notification system and notification engine for complex stock transactions, delivery logistics, and critical business operations management with reliable message delivery and localization support.

TECHNICAL SKILLS

Languages:

Java, JavaScript, TypeScript, Node.js, Kotlin

Backend & Microservices:

Spring Boot, Spring Cloud, Microservices, System Design, System Architecture, Enterprise Architecture, REST APIs, GraphQL, Event-driven architecture

Messaging, Streaming & Enterprise Integration:

Apache Kafka, Google Pub/Sub, Message Queues, Enterprise Integration Patterns, Distributed Systems

Databases:

MySQL, MongoDB, Elasticsearch, Redis, Query Optimization

Cloud Platforms & Architecture:

Google Cloud Platform (GCP), AWS, Cloud Native Architecture, Cloud Architecture, Kubernetes, Docker, Container Orchestration

DevOps & Continuous Integration / Continuous

Deployment (CI/CD) Pipeline:

Jenkins, GitHub Actions, GitLab Continuous Integration (CI), Git, Infrastructure as Code

Monitoring & Logging:

ELK Stack, Prometheus, Grafana, Splunk, Datadog

Frontend:

React.js, Redux, Node.js APIs

Development Methodologies:

Agile Methodologies, Scrum, Object Oriented Programming, Software Development Life Cycle

EDUCATION

Bachelor of Technology (B.Tech) - Electronics & Communication Engineering

JNTUA Ananthapur
06/2014 - 06/2018 | 80%

Higher Secondary

Narayana Junior College
06/2012 - 06/2014 | 95%

ACHIEVEMENTS

- 8x "Star of Sprint" award at UKG for technical excellence
- Reduced deployment time from 4 hours to 45 minutes with automated CI/CD pipelines
- Completed new production-level archival microservice within 1 month with zero downtime deployment
