PROFESSIONAL SUMMARY

Accomplished Software Engineer III with 8+ years of progressive experience architecting and delivering scalable cloud-native solutions using Java, Node.js, React.js, Angular, and Spring Boot. Expert in system design, microservices architecture, and enterprise-grade infrastructure optimization on AWS and Google Cloud Platform for Fortune 500 enterprises, achieving 99.9% system reliability while reducing costs by 15%. Demonstrated mastery in full-stack development, DevOps automation, cloud architecture patterns, and performance optimization strategies. Proven leadership capabilities consistently delivering 30% performance gains and 25% velocity acceleration through strategic architectural excellence and technical mentorship.

TECHNICAL SKILLS

- **Languages:** Java, JavaScript (ES6+), TypeScript, Node.js, SQL, HTML5, CSS3
- **Frontend:** React.js, Redux, Angular, Vue.js, jQuery, Bootstrap, Webpack
- **Backend:** Spring Boot, Express.js, RESTful APIs, GraphQL, Microservices, ProcessMaker
- **Databases:** MySQL, MongoDB, Query Optimization, Data Modeling, Indexing
- **Cloud & Infrastructure:** AWS (S3, SQS, SNS), GCP (GCS, Pub/Sub, Stackdriver), Docker, Kubernetes
- **CI/CD & DevOps:** Jenkins, GitHub Actions, GitLab CI, Continuous Deployment, Infrastructure Automation
- **Testing & QA:** JUnit 5, Mockito, Jest, Mocha, Cypress, Robot Framework, TDD, BDD
- **Performance Testing:** Apache JMeter, NeoLoad, Load Testing, Stress Testing
- **Code Coverage:** JaCoCo, Code Quality Analysis, 90%+ Test Coverage
- **Monitoring:** ELK Stack, Prometheus, Grafana, Datadog, Stackdriver
- **Security:** OAuth 2.0, JWT, Role-Based Access Control (RBAC), SOC 2 Compliance
- **Tools & Practices:** Git, JIRA, Agile/Scrum, Code Review, System Design, Performance Tuning

PROFESSIONAL EXPERIENCE

Software Engineer III

January 2022 - Present

Ultimate Kronos Group (UKG), Bangalore, India

- Spearheaded cross-functional engineering team of 3 senior developers, orchestrating high-impact workforce management solutions while driving 25% velocity acceleration and 30% defect reduction through strategic mentorship, comprehensive architecture reviews, and rigorous quality engineering practices
- Architected enterprise-grade cloud-native microservices leveraging Java Spring Boot and Node.js on Google Cloud Platform with sophisticated Docker/Kubernetes orchestration, implementing advanced CQRS patterns for scalable command and query separation, enabling seamless horizontal scaling and consistently achieving 99.9% uptime for Fortune 500 clientele
- Executed strategic cost optimization initiatives across GCP infrastructure through intelligent resource right-sizing and sophisticated automated scaling policies, reducing monthly infrastructure expenditure by 15% (\$45K annually) while maintaining sub-200ms API response times
- Established comprehensive observability infrastructure utilizing Prometheus and Stackdriver monitoring, achieving 40% reduction in mean time to resolution (MTTR) and 30% improvement in system availability
- Developed sophisticated React.js applications with Redux state management and contemporary UI/UX design patterns, delivering seamless experiences to 50K+ daily active users

Software Engineer

December 2020 - January 2022

Pramati Software Private Limited (Acquired by UKG), Bangalore, India

- Engineered sophisticated full-stack applications utilizing Node.js, React.js, and Express.js deployed on AWS infrastructure, delivering high-traffic enterprise solutions with exceptional 99.5% uptime and seamless scalability
- Championed Test-Driven Development methodology across 3 enterprise projects with Jest and Mockito, achieving 90% code coverage excellence and reducing bug count by 40% while sustaining 10K concurrent user capacity

Software Engineer

February 2020 - December 2020

Way2mint Services, Bangalore, India

- Developed robust financial communication APIs utilizing Node.js and Vue.js with MySQL backend, incorporating sophisticated rate limiting and comprehensive error handling mechanisms, driving customer engagement by 35% and optimizing page performance by 40%
- Architected advanced messaging template engine with GitLab CI/CD automation, achieving 40% reduction in query latency for high-volume messaging workflows and enabling seamless workflow orchestration

Full Stack Software Engineer

January 2018 - January 2020

Hidden Brains InfoTech, Ahmedabad, India

- Developed comprehensive full-stack web applications utilizing Node.js and Angular with sophisticated real-time capabilities, achieving 40% reduction in database response times through advanced query refactoring and strategic indexing optimization on MySQL
- Mentored 4 junior developers through structured code reviews and collaborative pair programming methodologies, elevating code quality metrics by 45% and fostering technical excellence
- Architected industry-standard RESTful API design patterns and sophisticated database optimization strategies, driving 30% performance improvement across multiple enterprise customer projects

ADDITIONAL ACHIEVEMENTS AT UKG

- Orchestrated sophisticated automated CI/CD pipelines via Jenkins and GitHub Actions with comprehensive test coverage (Jest, JUnit 5, Mockito, Robot Framework), dramatically reducing deployment cycles from 4 hours to 45 minutes while achieving 90%+ code coverage excellence with JaCoCo
- Deployed advanced performance testing infrastructure utilizing Apache JMeter and NeoLoad, strategically identifying bottlenecks and optimizing throughput for enterprise systems handling 10K+ concurrent users with precision
- Championed comprehensive Agile transformation initiatives and ceremony facilitation, collaborating strategically with Product Management and QA teams to consistently maintain 90%+ sprint completion rates
- Engineered robust OAuth 2.0 and JWT authentication mechanisms with granular role-based access control for multi-tenant SaaS platform, ensuring SOC 2 compliance and enterprise-grade security standards

EDUCATION

Bachelor of Technology in Computer Science and Engineering

JNTUA, Andhra Pradesh, India | August 2014 - August 2018 | CGPA: 8.0/10.0

NOTABLE ACHIEVEMENTS

- Recognized 8 times with prestigious "Star of the Sprint" Award at Ultimate Kronos Group for exceptional technical execution, architectural innovation, and consistent sprint delivery excellence
- Achieved 3rd place in 48-hour engineering hackathon, demonstrating exceptional rapid prototyping capabilities and advanced problem-solving methodologies under pressure
- Architected and delivered enterprise-grade cloud-native microservices solutions achieving 99.9% uptime and exceptional reliability for Fortune 500 enterprise clientele
- Orchestrated strategic cost optimization initiatives reducing monthly GCP infrastructure expenditure by 15% (\$45K annually) while maintaining industry-leading sub-200ms API response times
- Established sophisticated observability infrastructure, achieving 40% reduction in mean time to resolution (MTTR) and 30% improvement in system availability metrics
