SUMMARY

8+ years full-stack engineer expert in Java Spring Boot microservices (5+ years) and Node.js backend. Led architectural transformations: Node.js→Java/Kotlin, AWS→GCP, Pub/Sub→Kafka. Architected 12+ microservices handling billions of users with 99.95% uptime. Proven leader mentoring 5+ engineers, improving team velocity 25% and code quality 40%.

PROFESSIONAL EXPERIENCE

Senior Software Engineer
Jan 2022 – Present

Ultimate Kronos Group (UKG), Bangalore, India

- Architected and implemented CSR (Customer Session Resource) session management service handling billions of concurrent user sessions with 99.95% availability on GCP.
- Designed and built comprehensive file management system supporting multi-terabyte storage, file versioning, access control, and real-time synchronization across distributed systems.
- Led migration of Node.js microservices to Java Spring Boot and Kotlin-based services improving performance by 40%, reducing memory footprint by 35% with distributed caching and database sharding.
- Migrated messaging infrastructure from Google Pub/Sub (Node.js) to Apache Kafka (Java) improving throughput by 50% and reducing message latency with better partitioning strategies.
- Improved API performance through Redis caching, query optimization, and database indexing reducing response times by 20% and latency by 35%.
- Built an MCP server that feeds API context to AI tools and lets engineers access and update heavy tasks directly in chat, with guided option prompts that replace multi-step flows for creating posts and generating requests.
- Maintained 99.5%+ uptime across all mission-critical services with real-time issue resolution and proactive performance monitoring.
- Built AI-assisted engineering workflows using Claude Code skills and MCP servers to access Jira, GitHub, and Confluence data for story-driven development, test planning, and automated test generation.
- Contributed to code quality guardrails for AI-assisted development, including automated unit and API test generation aligned with team coding and review standards.

Associate Software Engineer
Dec 2020 – Jan 2022

Pramati Software Private Limited (Acquired by UKG), Bangalore, India

- Developed and optimized Node.js APIs for Groupe.io communication platform leveraging microservices architecture with distributed data processing and high throughput.
- Implemented micro frontend architecture enabling independent deployment and scaling of UI components with isolated state management and modular frontend development.
- Made critical architectural decisions optimizing entire project infrastructure for scalability, performance, and maintainability across distributed systems.
- Led migration of entire project from AWS services to Google Cloud Platform (GCP) ensuring zero-downtime migration, optimized costs, and improved performance with GCP-native services.
- Created comprehensive ELK stack monitoring dashboards for real-time analytics and observability across microservices, enhancing decision-making and reducing debugging time.
- Automated task creation processes using message queues and event-driven architecture, reducing manual intervention by 30% and improving operational efficiency.

Full Stack Developer
Feb 2020 – Dec 2020

Way2mint Services, Bangalore, India

- Developed messaging infrastructure for MJLifeSpaces and Way2mint applications handling millions of concurrent users with fast message delivery and real-time processing.
- Built data filtering and validation scripts to extract unique mobile numbers and emails, with comprehensive email and phone validation ensuring 99%+ data quality.
- Created promotional message dashboard with Excel-based bulk upload, lazy loading, and data mapping capabilities enabling users to send static and dynamic SMS/email campaigns.
- Implemented Excel generation and report formatting similar to Excel operations, allowing users to upload, map, and generate formatted reports for analysis and segmentation.
- Designed and optimized architecture for heavy bulk messaging operations with tech stack improvements, supporting millions of users with minimal latency and high throughput.

Software Engineer
Jan 2018 – Jan 2020

Hidden Brains InfoTech, Ahmedabad, India

- Developed admin dashboards for MRS Inventory with comprehensive multi-chart analytics including real-time data visualization and performance metrics.
- Built activity log analytics system tracking user actions per minute with detailed user behavior tracking across dashboard sections showing what users did at each specific time and location.
- Created reusable analytics library for activity tracking, user session management, and behavior analytics that became a core feature for all HB products and applications.
- Built inventory management flow for MRS Inventory covering stock transactions, stock tracking, and admin dashboards for inventory operations.
- Integrated Memcached caching layer, reducing database query time by 30% and improving application throughput for high-traffic admin operations.
- Built multilingual email notifications for inventory stock transactions and delivery logistics, keeping critical inventory operations reliable.

SKILLS

Languages:
Java, JavaScript, TypeScript, Node.js, Kotlin

Backend & Microservices:
Spring Boot, Spring Cloud, Microservices, REST APIs, GraphQL, Event-driven architecture

Messaging & Streaming:
Apache Kafka, Google Pub/Sub, Message Queues

Databases:
MySQL, MongoDB, Elasticsearch, Redis, Query Optimization

Cloud Platforms:
Google Cloud Platform (GCP), AWS, Kubernetes, Docker

DevOps & CI/CD:
Jenkins, GitHub Actions, GitLab CI, Git

Monitoring & Logging:
ELK Stack, Prometheus, Grafana, Splunk, Datadog

Frontend:
React.js, Redux, Node.js APIs

EDUCATION

B.Tech - Electronics & Communication Engineering
JNTUA Ananthapur
2014 – 2018 | 80%

Higher Secondary
Narayana Junior College
2012 – 2014 | 95%

ACHIEVEMENTS

- 8x "Star of Sprint" award at UKG for technical excellence and delivery
- Reduced deployment time from 4 hours to 45 minutes with automated CI/CD pipelines (80% failure reduction)
- Mentored 5+ engineers establishing 20+ architectural design standards and best practices
- Achieved 85%+ code coverage with JUnit across all microservices
